

QA Take-Home Exercise

This exercise is designed to give us a better understanding of how you approach quality in practice and how you would work as part of our team.

Please spend **no more than 90 minutes in total** on the exercise.

Part 1: Exploratory Testing

You will be testing our Hotel Search product in a **test environment**:

Test environment: <https://hoteller-theta.vercel.app/>

The product allows travelers to search for hotels using natural language. Users can describe what they are looking for, and explore the hotel results that match their search.

Imagine you have just joined the team and have been asked to assess the current quality of the product.

Spend approximately **60 minutes** exploring and testing the experience as you normally would in your day-to-day work.

This is a **test environment**, so feel free to explore the experience thoroughly and go through the flows you believe are relevant. For payment test, please use a **test card**:
4242 4242 4242 4242

Please submit your findings in the way you believe would be most useful if you were sharing this work with a Product and Engineering team.

At the end, make sure we can understand:

- your overall assessment of the current quality of the experience;
- which findings you believe deserve attention first, and why;
- what you would investigate next if you had more time.

You may use any tools you would normally use in your work.

We are not looking for a specific number of findings or a particular format. We are interested in seeing how you approach the task and how you choose to communicate your work.

Part 2: Investigation

Customer Support sends you the following report:

“We’ve had a few users saying that sometimes they repeat the same hotel search and get very different results. One user said it happened several times yesterday, but we haven’t been able to reproduce it consistently.”

This is all the information available to you right now.

How would you approach this from here?

Spend approximately **30 minutes** on this part.

Walk us through how you would approach the investigation and what you would do next. If you need additional information, explain what you would want to know and why.

Please submit your response in the way you believe would be most useful for communicating your reasoning and recommended next steps to the team.

There is no single correct answer. We are interested in understanding how you think, investigate, and make decisions with incomplete information.
